REPORT DOCUMENTATION PAGE			Form Approved OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

13. ABSTRACT (Maximum 200 words) This report documents work performed under FTA's Advanced Public Transportation Systems (APTS) Program, a program structured to undertake research and development of innovative applications of advanced navigation, information, and communication technologies that most benefit public transportation. This report is a compilation of existing and planned deployments of APTS technologies and services. The information was collected during the Fall of 1998 and was obtained through contacts with one or more persons at each agency. The objective was to include information from all agencies who submitted information for the 1996 National Transit Database (NTD) Report Year, the last year for which NTD data was available at the time. A total of 551 agencies provided information for this study. Only those agencies with existing or planned APTS systems are included in this report.

PREFACE

This research was conducted by the Office of System and Economic Assessment at the Volpe National Transportation Systems Center, U.S. Department of Transportation, Research and Special Programs Administration and was sponsored by the Office of Mobility Innovation, U.S. Department of Transportation, Federal Transit Administration. This report is the second in what will be a series of biennial reports tracking the existing and planned deployments of Advanced Public Transportation Systems (APTS) technologies and services in the United States.

The information contained in this report was collected by personnel at the Volpe National Transportation Systems Center (Volpe Center) during the Fall of 1998. The data were obtained through contacts with one or more persons at each agency. The data contained in tables are only as accurate as the information provided, primarily verbally, by the agency contacts and have not been verified by the Volpe Center.

The objective was to reach all agencies who submitted information for the 1996 National Transit Database (NTD) Report Year, the latest year for which NTD data were available at the time. Some reporting agencies were not appropriate for inclusion in this compilation, and some could not be contacted. Nevertheless, a total of 551 agencies provided information for this study. Responding agencies with no existing or planned APTS systems are not included in this report.

Appreciation goes to Melissa Laube and Lawrence Labell of the Volpe Center, to Howard Eichenbaum, Edward Newhall, and Margaret Stevens of EG&G who collected the information contained in this report, and to Walter Zak of EG&G who assisted in the collection of data and also designed a program to sort, summarize, and present the data. Appreciation also goes to Darryl Gruen of EG&G who compiled the data. Finally, appreciation goes to all the agencies who supplied information for this report.

SECTION 1. SUMMARY OF APTS DEPLOYMENTS

A summary of APTS deployments is shown in Table 1. Table 1 is divided into 13 sections corresponding to the 13 Advanced Public Transportation System (APTS) elements covered in this report. The summary table sections show the number of responding transit agencies with present and future deployments of APTS elements and the number of service types these agencies operate using APTS technologies. Table 1-1, for example, reveals that 212 transit agencies operate 361 service types employing some form of advanced communications. The table sections also summarize the deployments by the technologies utilized (where applicable), and whether the element is operational, in the implementation phase, or actively being planned. The breakdown by service type will sum to the service type total. However, the breakdowns by technology and status frequently will not sum to the transit agency and service type totals because of the number of agencies which utilize multiple technologies (e.g., trunked *and* digital communications, magnetic stripe *and* smart card fare payment, etc.) or operate one type of technology but are implementing or planning an upgrade to another (e.g., from signpost to global positioning system automatic vehicle location, adding pre-trip or wayside information to automated telephone information, etc.).

The numbers cited below encompass only operational systems and do not include systems which are in the implementation or planning phases. In 9 of the 13 APTS categories, the number of agencies implementing or planning these systems exceeds those with operational systems.

By a considerable margin, the APTS element with the most extensive operational deployment is advanced communications with 233 service types operated by 140 agencies. Next are automated transit information with 102 service types operated by 89 agencies, paratransit computer assisted dispatching with 101 operational systems, and automatic vehicle location with 79 service types operated by 61 agencies. These are followed by automated fare payment (49 service types, 42 agencies), automated operations software (43 service types, 40 agencies), mobility manager (42 service types, 42 agencies), multi-carrier fare integration (32 service types, 27 agencies), multimodal traveler information (25 service types, 21 agencies), automated passenger counters (24 service types, 24 agencies), traffic signal priority (16 service types, 16 agencies), vehicle component monitoring (14 service types, 13 agencies), and transportation management centers (11 service types in 9 areas).

The number of operational APTS systems found during this study is considerably larger than the number found in the 1995 study. Comparison of the data from the two studies reveals the following increases: advanced communications (202%), automated transit information (108%), paratransit computer assisted dispatching (40%), automatic vehicle location (259%), automated fare payment (96%), automated operations software (72%), mobility manager (600%), multi-carrier fare integration (146%), multimodal traveler information (400%), automated passenger counters (118%), traffic signal priority (77%), vehicle component monitoring (180%), and transportation management centers (10%).

There were 90 more agencies contacted in this study than in the prior study. However, most of these additional agencies are small and not likely to have APTS systems.

SECTION 2. APTS DEPLOYMENT IN THE U.S. BY TRANSIT AGENCY

Table 2 lists present and future deployments of APTS elements by transit agency and service type, as well as the number of vehicles operated (by the agency or under contract) in each service type. In some instances, not all vehicles in each service type are, or would be, equipped with APTS elements. These agencies are arranged alphabetically, first by state and then by agency name.

As indicated in the table legend, items enclosed by parentheses and brackets are in the implementation and planning phases, respectively. All others are operational elements. Where multiple entries exist in any table cell, two or more technologies are utilized, sometimes in different phases of deployment. With one possible exception, the transit elements contained in the column headings are those that involve some form of automation or electronics, and are therefore considered Advanced Public Transportation Systems. The possible exception is the mobility manager, which may or may not incorporate automation.
